Reason for Allowance

The following is an examiner's statement of reasons for allowance: in view of the amendment filed on 10-12-04, the prior art reference of records (US Pat. 6,697,205) fails to teach or fairly suggest a temperature detection circuit comprising: a reference current generator having a first PMOS transistor connected to a power supply voltage and to an op-amp, first to third resistors connected in series between the first PMOS transistor and the ground voltage and a first voltage generated between the first and second resistor as called for in claims 1 and 6; a temperature detection voltage generator for generating a temperature detection voltage in response to an ambient temperature and the output signal of the OP amp, wherein the temperature detection voltage generator comprises a second PMOS transistor having a source connected to a supply voltage and a gate connected to an output terminal of the OP amp, fourth and fifth resistors connected in series to a drain of the second PMOS transistor, and a diode-connected PNP transistor provided between the fifth resistor and the ground voltage as called for in claim 12. Therefore, claims 1, 2, 4-8 and 10-15 are presently allowed.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hiep Nguyen whose telephone number is (571) 272-1752. The examiner can normally be reached on Monday to Friday from 7:30am to 4:00pm.
